### Private Web Server(PWS)?????

????IRIS????????????Apache Web????PWS????????????;????????Web????????PWS??

The PWS is not supported for any other purpose.

For deployments of http-based applications, including REST, CSP, Zen, and SOAP over http or https, you should not use the private web server for any application other than the Management Portal; instead, you must install and deploy one of the supported web servers. For information, see the section "Supported Web Servers" in the online InterSystems Supported Platforms document for this release.
