来自海外的问题 : 在 SYSTEM EXPLORER -> TOOLS -> SQL PERFORMANCE TOOLS -> SQL RUNTIME STATISTIC更改配置后如何删除数据

大家好！

不久前，我将SQL Runtime 统计中的配置更改为“Turn on Stats code generation to gather stats at the Open and Close of a query”。进行此更改后，CACHE的基础（cache / mgr / cache / ）增长了很多，达到**198GB**。

昨天，我将SQL运行时统计信息的配置恢复为默认值“关闭统计信息代码生成”，并且缓存基数不再增长。

我的问题是？

如何删除在CACHE基础（cache / mgr / cache / ）中创建的此数据，以及可以删除哪些数据而不影响系统。

谢谢，
法比奥（FábioLouly）。

How and what to delete data after changing configuration in SYSTEM EXPLORER -> TOOLS -> SQL PERFORMANCE TOOLS -> SQL RUNTIME STATISTIC

Hello everyone!

Some time ago, I changed the configuration in SQL Runtime Statistic to "Turn on Stats code generation to gather stats at the Open and Close of a query". With this change, the CACHE base (cache/mgr/cache/) has grown a lot to reach 198GB.

Yesterday, I returned the configuration of SQL Runtime Statistic to the default which is "Turn off Stats code generation" and the cache base is no longer growing.

My question is?

How to delete this data that was created in the CACHE base (cache/mgr/cache/) and what data I can delete without affecting the system.

Thanks,
Fábio Louly.
