日志守护进程问题

```
Automatic journal file roll to: d:\intersystems\healthshare\mgr\journal\MIRROR-JHIPMIRROR-20210820.004
08/20/21-08:03:59:621 (94904) 1 Journal Daemon has been inactive with I/O pending for 10 seconds:
gjrnoff=707263596,iocomplete=707095108,filecnt=9355,fail=0
08/20/21-08:04:19:746 (94904) 3 CP: Pausing users because Journal Daemon has not shown
    signs of activity for 30 seconds. Users will resume if Journal Daemon is active again
08/20/21-08:04:22:980 (124864) 2 MirrorServer: Mirror primary entered permanent trouble state.
08/20/21-08:04:24:011 (124864) 1 MirrorServer: Lost ReadDmn (ACK) connection to backup: JHIPB.
                                                                    JHIPB (backup) terminated
```

请问一个日志守护进程未活动是什么问题，日志守护线程是什么

#Caché
